

RKP10012000

Personal Fuel Dispenser For Marine Applications

Fuel is often leaked as a result of personal fuel dispensing either with a funnel or direct from the fuel storage device into the desired tank. Large fuel tanks are often too heavy to lift. The Racor Personal Fuel Dispenser makes dispensing fuel from personal storage devices safe, quick, and easy.

The Personal Fuel Dispenser uses a 12 volt lift pump to easily and conveniently lift the fuel from the storage device into the desired fuel tank. Simply plug in the power cord, place the hose in the fuel storage tank, and press the trigger. The pump is protected by a filter to ensure long life.
